December 2014 Volume 23 Issue 02

The Latest and Greatest from Apple

by Sue Beal

It was great to have Jack Buccellato back in front of the room at UKMUG this month!

He started off by putting our minds at ease about the recent spate of China-originated bugs and viruses infecting iPhones. Jack said that you have to go to a third party store and/or jailbreak your device to have it be exposed. And, Apple has patched the problem now, so we are not likely to be affected in any way. He stresses that you should always be watching for a con, watch for anything that doesn't seem right, and if it seems "off," don't click on it!

He asked how many in the room had upgraded to Yosemite, and about 7-8 people had, about 16%.

He said it's safe now to do it, as long as you backup - backup - backup first. He says it multiple times because you should do it at more than once, to different places. Maybe once in the cloud, and once to an external drive. Or more. Burn a DVD. What could an extra backup hurt?

He also said to clean up your machine. He didn't go into detail, but I'm guessing you know best where you might need to tidy things up. I don't know about you, but I like to back up BEFORE I clean up... and then again after (not rewriting over the first backup). That way, if I got carried away with the cleaning part, I can go to the pre-clean-up backup and find the things I mistakenly deleted.

And the final thing he mentioned that you need to do before upgrading, is your "due diligence." It seems to me that this

Jack Buccellato from All Keys ComputerGuys had to present solo when his co-presenter Chris Muller got stuck in major traffic on his way to the Keys. He did a great job, we forgot all about missing Chris!!

part comes first, really, before you make the decision to upgrade. It comes in a couple parts. You need to know if your machine is capable of running the upgrade (more on this below). And you need to know what is going to happen with your favorite apps when you update. Do you have to buy a new Quicken, or Adobe Suite? Expenses like these will factor into your decision to take on the "free" upgrade.

When you decide to do it, Jack says it takes about 20-25 minutes on a good connection to download Yosemite, another 20-25 to install, and then once you start it up it takes a while (depending on the amount of data you have on your drive(s)), to run all its indexing for Spotlight. To start the process, go to the App Store and look for the mountain picture that represents Yosemite. Click the "Free" button.

While it's possible to revert back to a previous OS after installing Yosemite, it's not easy, so make sure when you do the upgrade, you're ready for it.

Yosemite and Older Hardware

If your machine can run Snow Leopard

OUR NEXT MEETING:

Thursday,
Dec. 11, 2014
7pm at Key Largo Library
Community Room,
MM 101.4 Oceanside

Our Annual Non-Denominational Holiday Party!

This year we celebrate our
UKMUG holiday with a
traditional meal of roast turkey,
ham and the fixin's! Karen's
bringing the meats, so your job
is to bring a side dish or dessert.

This year we have our first-ever
UKMUG "Ugly Sweater"
contest! Wear your wildest,
wackiest, UKMUGgiest holi-
day outfit (sweaters optional)
and compete for fun and prizes.

There will be also be games
and gifts for attendees.

Join us!

(Sorry, no Beginner's Circle in December.)

About UKMUG

UKMUG meets at the Key Largo
Library Community Room on the
second Thursday of each month.
Speakers begin at 7pm, and may go
as late as 9pm.

Beginners can come at 6:30 with
questions, and we encourage others
to come and help.

Voluntary annual dues are collected
in Jan-Feb-Mar: \$25.

or Lion, it will run Yosemite, BUT lack of memory and the wrong video card can bring you down. You need a Radeon card, and even these sometimes have problems. Jack says usually a 2010 model or younger will be ok. If you're borderline, add as much memory as you can. A solid state hard drive can also greatly speed up an old machine. Yosemite is robust, and if your machine isn't up to it, it's going to be slower than you like.

Jack suggests a solid state drive. Recycle the old spinning drive for backing up. He was asked about the hybrid "fusion drive," and said that he is not a fan.

What's in the new OS?

Jack has been stressing the concept of the convergence of mobile and desktop computing for several years, and he says, with Yosemite, it has arrived. He showed a cool 60-second movie very quickly showing the new features. You can see it at <http://ukmug.pbworks.com/w/page/5624170/Meeting> (you need Keynote). Scroll down, it's the first thing under the November 2014 heading.

Handoff

Once of the new features is Handoff. This allows you to pick up where you left off, from one device to another. When your devices are near each other, they can automatically hand off activities to each other. For example, if you're writing an email on your iPhone and walk up to your Mac, your email is ready for you to pick up on your Mac exactly where you left off.

Handoff works with Mail, Safari, Maps, Messages, Reminders, Calendar, Contacts, Notes, Keynote, Numbers, and Pages. You can hand off an activity from your Mac to your iPhone or iPad, or from your iPhone

IF YOU MISSED JACK'S TALK

**Head to Apple's
website and
watch the
Keynote and the
Watch video.**

**That will catch
you up on
everything!**

or iPad to your Mac.

Handoff is tied to your Apple ID, so if you and the wife and family have been sharing one, it might be time to get separate IDs. More on this later.

Interface

The new Yosemite interface is "thinner" with flatter icons and cleaner type. More like what we've become used to on the iPhone.

Jack particularly likes that you can make your background black and the type white. Reducing the glare is easier on the eyes for those who spend many hours at a screen.

Safari

The new Safari has a streamlined toolbar that puts powerful browsing tools at your fingertips, while freeing space for your web pages. You can scroll through your open tabs with a gesture or view them all in one window with the new Tab view. You can access your favorite sites with the new Favorites view, which stays in sync across all your devices. With easier sharing, better search tools, and energy-saving technologies, Safari is the "smartest" way to browse the web.

Your favorite sites stay in sync on your iPad and iPhone, so no matter which de-

vice you have, your favorites are with you, and sharing web pages from Safari is now easier. The people you've recently shared with appear in the Share menu, and Safari also remembers how you shared with that person — via Mail or Messages — so you can quickly share the same way again. In addition, third-party developers can create extensions that allow you to customize your Share menu with new services and social networks.

Mail

Email on a Mac gets even better with Yosemite. With the new Markup feature, you can quickly annotate an image or PDF attachment. You can also fill out a form and even include your signature, then send it back — without leaving Mail. It's almost like having a mini Photoshop/Photobooth built into Mail.

Mail Drop

A new feature called Mail Drop lets you send large attachments without worrying about whether they'll be held up by your service provider.

When you're signed in to iCloud, Mail Drop lets you send large files like videos, presentations, even a folder of im-

continued on page three

Chuck Dillaman catches up with Don Schneider before the meeting starts.

ages without having to worry about your service provider's limitations. Just drag your attachments, up to 5GB total, into your mail message, and Mail Drop handles the rest. If your recipients use Mail in OS X Yosemite, they'll receive the attachment just as they do today. If they use another app or webmail, they'll receive your email with a link to download it. There's no charge to use Mail Drop, and it works no matter which email service you use.

Messages

So many ways to start a conversation! You can send unlimited text messages to anyone with a Mac or an iOS device using iMessage. You can have group conversations with two or more friends. If you have an iPhone, you can send SMS text messages from your Mac to friends, no matter what kind of phone they have.

And now, every message on your iPhone appears on your Mac.

Soundbite.

Sometimes it's nicer for them to hear what you're saying than to read it. Record a quick audio clip of your voice and send it to friends without leaving the Messages app.

New ways to control the conversation.

Now you can add titles to Messages conversations so they're easier to find and keep track of. If your friends are sharing their locations from their iOS devices, see a map of where they are at that moment. When you're having a group conversation with three or more participants, you can add and remove people, or even remove yourself from the conversation (all participants need to be on Mavericks, Yosemite or iOS8). You can stop notifications from any messaging session or browse all the photos and videos within any message thread. To access all these features, open the new Details view.

Family Sharing

Jack says, "Apple heard you." Family Sharing makes it easy for up to six people in your family to share each other's iTunes, iBooks, and App Store purchases without sharing accounts. Whenever one family member buys a new song, movie, book, or app, everybody in the family group can enjoy it, too. You can also share photos, a family calendar, and more to help keep everyone connected.

That said, it doesn't sound like it's going to be easy or even possible to combine exist-

ing accounts into a Family, or to separate them when you've been sharing. Might take a while to sort out.

But for new families setting it up, it's great. Family members get immediate access to each other's purchased music, movies, TV shows, books, and apps. Browse everyone's libraries and download what you want with a click anytime you like. Because all family members use their own Apple IDs, there's no need to share accounts or passwords.

Parental Controls Still in Place

Parents get more control, while kids feel like they have more freedom. Enjoy the convenience of paying for family purchases with a single credit card. Enable "Ask to Buy" to review iTunes, iBooks, and App Store purchases requested by children before completing them. You can even create Apple IDs for children under 13 years old so they can participate, too.

Finder

Store any file in iCloud Drive. Then find it on any device. "Welcome to your place in the cloud." Located in the Finder, iCloud Drive lets you store all types of

files, organize them the way you like, and access them from all your devices.

iCloud Drive works like any other folder on your Mac. Just drag and drop files right into it. Changes you make on one device are made on all your other devices, and your files are always available on your Mac and iOS devices, even when you're offline. Changes you make offline are synced when you connect to the Internet.

You've got all kinds of files on your Mac. Keeping track of them is easier with iCloud Drive. You can create additional folders within iCloud Drive and add tags so you know what's what. Rearrange it however you want. With iCloud Drive, you can always find the latest version of a file on your iPhone, iPad, Mac, or PC, and also at iCloud.com.

That's a quick summary of the new features in Yosemite. Then Jack went on to talk about iOS8.

What's New in iOS8

- Quickly find and edit the photos you take.
- Add your voice right in a text message.
- Let your health and fitness apps communicate with each other, with your trainer, and even with your doctor.
- New keyboard options and even more ways to share your content.
- Use iCloud and Touch ID in ways you never have before.

"I was texting while driving my sleigh. Your toys are in a ditch outside Miami."

Jack: On the Importance of Backups

(We can't say this enough!)

If something is important to you BACK IT UP. Photos, contacts, financial information, records. Make a copy somewhere other than where it normally is stored. Several backups are better than one.

Put it on a thumb drive, an external hard drive, burn a DVD, and/or send it into the cloud.

Critical information should be backed up outside your home or office. If there's a fire or flood in the primary location, you still have an offsite copy.

Do it today. You will not be sorry!

Photos.

The all-new Photos app makes it simpler than ever to find and rediscover your favorite photos with new search features and smart albums that organize your photos for you. And you can make every shot look even better immediately after you've taken it with powerful new editing tools, no matter your skill level. And iCloud Photo Library, in beta, stores every photo and video you take, making them accessible from your iPhone, iPad, and iPod touch.

iCloud and iOS 8.

iCloud is built into iOS. It makes sure your devices always have the latest versions of your documents, apps, contacts, and more. It even helps you track lost devices.

Family Sharing.

Up to six people in your household can easily share each other's purchases from iTunes, iBooks, and the App Store. You can also keep up with each other's photos, calendars, locations, and more.

Starting to sound familiar? That's because iOS8 and Yosemite are converging!

Thank you, Jack, for another very informative and fun evening at UKMUG. If you have any questions about the upgrades, call Jack at the number shown in the ad on page 3. 

Let's Make Movies

by Diane Marshall

There are countless stories in the hearts and minds of UKMUG's diverse members—year round residents and snow birds, photographers and pilots, school teachers and graphic artists, bankers and social workers, fire fighters and sales clerks, moms and dads, sisters and brothers. We want to see all of your stories (okay, well, maybe not ALL of them, but a lot of them) at the UKMUG Film Festival on February 12, 2015.

It's going to be fun! Think about it. Hardly a day goes by without a friend or family member sending us a video of something in their garden, yard, their kids or grandkids playing, their dogs doing funny tricks, their vacation to the Caribbean. They make us smile, feel good, feel sad and inspire us. Now is your chance to make your own video and make your fellow UKMUGers laugh, cry and applaud.

Inspiration? Here are some ideas. For my own inspiration—and to prove that YES, anyone can make a movie for the UKMUG film festival—I went to the YouTube.com and GoPro.com websites and searched for common words: caterpillar, puppy, Key Largo and music. Though the words were common, they all conjured up emotions—yucky, joy, nostalgia and good times, respectively—before I even watched the first video.

Under the word caterpillar, there was a video called the "Caterpillar Sting Test." It is just under two minutes long, quite interesting and absolutely something my little brother might have tried. Yes, the little brother who put a baby cobra in a soda bottle when he was 12 years old, then brought it into the house to show my parents. (He went on to become a Navy SEAL.) "Caterpillar Sting Test" could be submitted under either of two UKMUG Film Festival categories: the Documentary/Educational category or the Horror/Sci-Fi/Animation category, depending on your point of view. <http://www.youtube.com/watch?v=QCj7Rn51S6E>

When I searched the words Key Largo, there were lots of videos, including this one, which is just under 4 minutes and is called "Top 5 Things to Do in Key Largo." If you have lived here a month, you could have made this video. It would be suitable for our Film Festival's Travel category

continued on page five

(under Advertising, too, if we had such a category). <http://www.youtube.com/watch?v=tt58ChU7unQ>

GoPro.com is another great site for inspiration. When I entered the word puppies, I wasted, I mean spent, an hour watching video after video and whimpering with delight. After slapping myself to get on with writing this article, I decided on this heart-warming video, "Duncan the Dog," which is just over 4 minutes, for my example. It could be entered in our Animal category (or most-likely-to-make-the-audience-cry category, if we had one). <https://gopro.com/channel/lifes-moments/duncan-the-dog>

For my final search, I chose the word music. The example is perfect for either the Music or Humor category. There were lots of great choices, but this GoPro video, "David Finlayson's Trombone Silliness," was the best of both categories and proved that anyone can make a video for the UKMUG Film Festival. <https://gopro.com/channel/music/david-finlaysons-trombone-silliness>

Your Mac, iPad and iPhone already come with some great tools—a camera and software such as iMovie—that will help you to get started. You can search online for "how to make a movie with iMovie" to find numerous instructional videos and slideshows. Or ask your kids, grandkids or the neighbor kid for help!

We hope you will share your story. Tell us your story in 6 minutes or less. Be adventurous! Add a title, film credits and background music. Format it as video or in a slideshow. Content should be appropriate for all audiences. Submit your entry as a QuickTime video file burned onto a CD-R or DVD-R disc.

Films will be screened on February 12, 2015, at the monthly UKMUG meeting. Judging will take place right after the screening. Awards will be given for the best in each of six genres as well as for Best in Show.

Help make the first UKMUG Film Festival a success by submitting your "film." Pick up an application or download it from the UKMUG Wiki webpage. The submission deadline is January 16, 2015. Mail it to Sue at UKMUG, 219 Second St., Key Largo, FL 33037, or give it to Sue, Karen, Diane or John at an UKMUG meeting. 

26 Stunning iPhone Photos Taken by a Pulitzer Prize-winning Photographer

submitted by Graham Thomas

The iPhone has become something of a darling among professional photographers — inspiring competitive photography contests, photos of candid moments from within the White House, and praise from even the globetrotting photographers of National Geographic.

And when it comes to accomplished photographers, David Hume Kennerly ranks pretty high. The photojournalist has captured the Vietnam War, the "Fight of the Century" between Muhammad Ali and Joe Frazier, and Gerald Ford's presidency. He had already won a Pulitzer Prize for his work before he turned 30.

Given those credentials, you might be surprised to hear that Kennerly's latest work is a book dedicated to the art of the iPhone photo. David Hume Kennerly *On the iPhone: Secrets and Tips from a Pulitzer Prize-winning Photographer*, is a collection of photos taken from Kennerly's personal smartphone, alongside helpful instruction meant to make you a better photographer.

An App A Day...

submitted by Graham Thomas

For the iPhone:
Gps4cam Pro

What do Dorian Grey and I have in common?

A. Both devilishly handsome and youthful-looking

B. Both the subject of a rotting portrait hidden in an attic somewhere.

The answer is, of course, A, (I don't have an attic, my rotting portrait is in my parents' garage). This, I reason to myself, must be the reason why I have such a hard time remembering where and when photos were taken. Gps4cam is super-practical, just open the app and start snapping. Gps4cam then creates QR code with time and localisation information that you can then attach to your photos on your computer. Gps4cam drops from \$3.99 to \$0.99.

Download Gps4cam Pro at the App Store. For a daily free app, subscribe to AppGratis: <http://appgratis.com/> **MU**

Thanks to Denise Malefyt for this one!

Longform's New App Lets You Read Great Journalism from Your Favorite Publishers

If you have managed to keep your attention span intact during this distracting information age, then you're almost certainly familiar with Longform.org, a web site that makes it easy to find something great to read online, especially if you like reading informative, well-crafted works of non-fiction. Recently, Longform enhanced its service with the release of a new, free app for iPhone and iPad. It's the "only 100% free app that filters out the internet junk and delivers nothing but smart, in-depth reads." And, drawing on material from 1,000 publishers, the app lets readers "create their own custom feeds of high quality, feature-length journalism," and then read it all on the go. And it's free! **MU**

Take Control of Yosemite: installation, new features & sharing

by Adam & Tonya Engst, Take Control publishers

To put you in control of Apple's new OS X 10.10 Yosemite we have three books for you today; the first two are straightforward and useful, and the third has more real-world, practical advice for the modern Mac user than anything we've published recently:

- "Take Control of Upgrading to Yosemite," by Joe Kissell
- "Yosemite: A Take Control Crash Course," by Scholle McFarland
- "Digital Sharing for Apple Users: A Take Control Crash Course," also by Joe Kissell

So, what's in each book and why are we excited about them?

Do you want to upgrade to Yosemite with confidence? You can't go wrong with "Take Control of Upgrading to Yosemite," now in its 8th major installment. The title has helped tens of thousands of Mac users since 2003, and gives you the benefit of Joe Kissell's superlative background. You'll ensure that your hardware and software are ready for Yosemite, protect against problems with a bootable duplicate, eliminate digital clutter, prepare your Mac, and decide on your best installation method, no matter what version of Mac OS X you're upgrading from, all the way back to 10.4 Tiger. You'll find full installation directions plus advice on over a dozen things to do immediately after installation and troubleshooting techniques. Joe also explains upgrading from the Yosemite public beta and "upgrades" that involve moving your data to a new Mac from an old Mac or Windows PC. It's 152 pages and costs \$10.50 after the 30% MUG discount.

Buy now > <http://tid.bl.it/tco-yosemite-upgrading-mug-discount>

The next two books are in our new Take Control Crash Course series, which brings you the first-rate content you expect from us in shorter chunks so you can dip in and read quickly. Because so many Take Control readers provide tech support to others, each concise chapter has sharing buttons and practical tweet-tips, making it easy to freely share a few pages with Facebook friends, Twitter followers, and others who really need the information. Take Control Crash Courses feature a

modern, magazine-like layout in PDF while retaining a reflowable design in the EPUB and Mobipocket.

Read "Yosemite: A Take Control Crash Course," to get more out of your Mac as you go about your everyday activities. Written by former Macworld editor Scholle McFarland, this book introduces Yosemite's new interface and discusses new features like iCloud Drive, Handoff, iPhone voice/SMS relay, and Notification Center's Today view. You'll learn about key changes in core Apple apps with chapters about Safari, Mail, Messages, and Calendar. You'll also find answers to questions brought on by recent additions to OS X, such as how to control notifications, tips for using Finder tags, and working with tabbed Finder windows. The book closes with two under-the-hood topics, setting up a new user account (for a child, guest, or troubleshooting) and troubleshooting (with techniques including Safe Boot and OS X Recovery). It's 77 pages and costs \$7 after the 30% MUG discount.

Buy now > <http://tid.bl.it/yosemite-crash-course-mug-discount>

Beyond what's new in Yosemite is the larger problem facing most of us — how to work effectively in today's ecosystem of devices, services, and collaborators. Frankly, sharing with other people and devices is messy, because everyone wants something different. That's why "Digital Sharing for Apple Users: A Take Control Crash Course" may be our most important book of the year, and why we are so grateful to Joe Kissell for taking on the challenge of describing how to share nearly anything you can think of in nearly any imaginable situation. Here are just a few of the gems in this book:

- * How iCloud Photo Sharing and My Photo Stream are entirely different
- * How to share photos fleetingly, privately, permanently, or with your fridge
- * The best ways to sync a project's worth of files with others
- * Services to provide ubiquitous access to your own files across devices
- * Quick ways to make a file available for download by anyone

- * How to share calendars with others
- * A tutorial on enabling Family Sharing
- * Workarounds for contact sharing
- * How to rip a DVD to your MacBook Air using an older Mac's SuperDrive
- * How to turn your iPhone or Mac into a Wi-Fi hotspot
- * Ways of watching your uncle work remotely, as you help him with iTunes
- * Approaches to syncing browser bookmarks and tabs with multiple devices
- * How to securely share a collection of passwords with someone else

The list of essential but often frustrating modern tasks goes on and on, and the solutions go way beyond what Apple offers, so the book does too. Non-Apple products mentioned include 1Password, AirFoil, BitTorrent Sync, Cargo Lifter, CloudyTabs, Dropbox, Exchange, Facebook, Flickr, Google+, Google Calendar, Google Chrome, Google Docs, Instagram, iPhoto Library Manager, Outlook, Pandora, PhotoCard, Printopia, Reflector, Rdio, Spotify, Syncmate, Syncphotos, Transporter, Twitter, Xmarks, and more.

And, thanks to the new Take Control Crash Course format, you can jump right to the chapter that answers your question, without having to read through lots of other information. It's 87 pages and costs only \$7 after the 30% MUG discount.

Buy now > <http://tid.bl.it/digital-sharing-crash-course-mug-discount>

Of course, you can buy all three at once quickly and easily from our catalog page — but first email Tonya for the 30% MUG discount on your entire order. tc-comments@tidbits.com

Thank you for your support of Take Control... we couldn't do it without you! Follow us at <https://twitter.com/TakeControl> for useful tips coming soon!
